Hanging Methods

Ring mesh drapes can be hung by any competent installer from strong, conventional track using carriers with integral hooks.

Choose from these 5 methods:

Small Grommets

Large Grommets

Rings

Tab Top

Continuous Pocket

Fullness Options

A minimum fullness of 20 percent is required to achieve a semi-flat natural fall.

For accordion folds, a minimum of 60 to 80 percent fullness is required.

Flat

50% Fullness

100% Fullness

Additional Properties of Ring Mesh Drapes

Permanent: Despite initial cost, Metal Mesh Drapes, unique maintenance and longevity properties prove it more economical over the life of the installation.

Maintenance Free: Metal Mesh Drapes tend to shed dust. An occasional brushing or dusting will suffice. Stains wash off with mild soap and water.

Fireproof: Its melting point is that of the base metal.

Air Conductive: While effectively concealing heat and air conditioning outlet, Metal Mesh Drapes permit the relatively free circulation of warm and cool air currents.

Stable: Metal Mesh Drapes neither shrinks nor stretches in use.

Malleable: Metal Mesh Drapes can be hung in strips, panels or joined to create a metal fabric with superb draping characteristics.

Mildewproof: It is unaffected by dampness and humidity.

Sunrot-proof: It is impervious to even intense tropical sunlight.

Light Diffusing: Metal Mesh Drapes have exceptional light filtration properties. The degree of light control is conditioned by fullness and prevailing light conditions.

Max panel size

Height: 20'
Width: 20'

* larger sizes require multiple panels

Finishes

Ring Mesh Drapes are available in Natural Stainless Steel, 6 standard Enamel colors or a custom color of your choice.

*Please note: Natural stainless steel finish is not plated and small color variations between the panels that may be woven together to comprise the actual width and length will sometimes be visible.
